PROFESSIONAL SUMMARY

Full-stack Software engineering with extensive commercial experience working independently on complex ambiguous problems in production systems. I have extensive experience working across backend, frontend, and data-processing systems, and I actively engage in collaboration and communication within an agile team. I have a solid foundation in software engineering, data structures, and algorithms, which I gained from my Bachelor of Software Engineering with Honours and continued independent study.

EXPERIENCE

Junior Software Engineer

June 2025 – Present

Frog Parking

Manawatū, NZ

- Independently debugged and resolved ambiguous production issues across a distributed C#/.NET platform involving REST APIs, SQL databases, embedded controllers, and Azure messaging infrastructure.
- Collaborated with colleagues in agile workflows, doing bi-weekly sprints, attending standups, reviewing pull requests and having my pull requests reviewed.
- Wrote automated unit and integration tests both for fixes and for features.
- Investigated root causes of failures by analysing logs, tracing event flows, and reasoning across multiple interacting services and data pipelines.
- Supported PCI and SOC 2 compliance by reviewing code and documentation, identifying security risks, and ensuring no cardholder data was logged in production systems.

Software Engineer Intern

Nov. 2023 – Jan. 2024 and Nov. 2024 – Feb. 2025

Kahu EV

Manawatū, NZ

- Designed and implemented web-based interfaces for route and vehicle simulation, including interactive map-based inputs and dynamic forms..
- Designed and implemented data-processing and backend logic to support vehicle and route simulation features.
- Collaborated in a cross-functional team collaborating with mechanical engineers to support energy consumption simulation development.
- Validated simulation outputs against real-world vehicle telemetry to quantify model error and ensure reliability.
- Worked across backend logic, data processing, and UI development in collaboration with a cross-functional engineering team.

PROJECTS

Created Java Website in a Team

Feb. 2023 – Nov. 2023

- Created website in Java with Spring Boot as part of team of 7 doing bi-weekly sprints.

EDUCATION

University of Canterbury

Christchurch, NZ

Bachelor of Software Engineering with Honours

Feb. 2021 – Nov. 2024
